-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 21, 23 and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Platzzer, Jr. (US Patent No. 3,588,231).

Platzzer, Jr. discloses a reflector system comprising a support membrane structure (Fig. 1, 42) with an actuator mechanism (12), an adjustment beam (26) with an end of the adjustment beam being attached to the actuator mechanism (see 26 is attached to 12), a frame structure attached to an opposed end of the adjustment beam (20), a reflector segment attached to the adjustment beam (16), wherein the reflector segment is an optical reflector (inherent) and a radio wave reflector (inherent due to a radio wave can be reflected off from the reflector).

Claim Rejections - 35 USC § 103

Art Unit: 2872

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 22 is rejected under 35 U.S.C. 103(a) as being unpatentable over Platzzer, Jr.

Platzzer, Jr. discloses the claimed invention as set forth above except the reflector segment is not a plurality of reflector segments. It would have been obvious to make this single piece of the reflector segment to be a plurality of segments for the purpose of individually controlling the surfaces where the lights are reflected off, so more than one view can be seen.

Allowable Subject Matter

5. Claim 25 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claims 1-20 and 25-42 are allowed.

Art Unit: 2872

7. The following is a statement of reasons for the indication of allowable subject matter:

Claims are allowable at least for the reason that the prior art does not teach or reasonably suggest the actuator mechanism that has a ferromagnetic plug, a center band, an actuator material region and an outer band in the order of claimed combination.

Jin et al (US Patent No. 6,574,026 B2) and Estabrooks (US Patent No. 4,493,568) each discloses an actuator mechanism comprising a ferromagnetic plug and actuator material region but does not disclose the center band and the outer band in the order of claimed combination.

Conclusion
